

Abstract

(see Fig. 1a)

In order to make an operating device easier to operate and to make final positions more convenient, it includes

- 5 - a base body (8), that is at least partially surrounded by
- a housing body (2),
- whereby the housing body (2) includes a disk body (3), that is held via a basic position magnet arrangement (6) with respect to base body (8) and
- 10 that may be moved by at least one motion element (5) with respect to the base body (8).
